

# Oplàmp

Bright lighting and changing moods define Oplàmp, a lamp that both offers and invites different and innovative uses. Oplàmp is a table lamp composed of a ceramic body and a solid durmast base on which an LED light source is placed. Thanks to its shape, obtained through the fusion of three cones, the Oplàmp's body can be rotated to three alternative positions that creates different types of light. Oplàmp simultaneously projects two beams of light that create different combination:

**high table lamp + ambient light,**

**low table lamp + ambient light,**

or simply **two ambient lights.**

Its design aims to enhance the relationship between people and their living space by combining functionality, lighting and materials. The beams of light that are produced are an idealistic projection of its shape within space and they create an appropriate atmosphere that interacts with its surroundings.

All components are made in their entirety in Italy.

Especially for Milan Design Week 2018, Oplàmp is showing its colours. On request, it is possible to customize the lamp's body with any colour, thus making your Oplàmp unique.

Oplàmp was presented at the Superdesign Show 2017 - Discovering: People & Stories, it was given a special Ettore Sottsass nomination at the Materia Independent Design Festival 2017 and it won the Top Design Selection 2017 award.
